(54) DEVICE AND METHOD FOR INFORMATION PROCESSING AND RECORDING MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To properly generate a response sentence as an answer to a user's speech.

SOLUTION: When the user speaks a prescribed command, a robot recognizes the spoken command and operates according to the recognition result. For example, the robot speaks the answer sentence as an answer to the speech of the user. In this case, the robot distinguishes proper use of words, such as 'this', 'that', and 'it' corresponding to the positional relation between the robot and user, the robot and an object, or the user and object. When the object is near the robot, the robot represents and pronounces object with a word, such as 'this box' or 'it', showing a nearby body, while when the object is at a distance, the robot represents and pronounces the object with a word, such as 'that box' or 'that', indicating a distance body.
